EDUCATION

University of Central Florida
Bachelor of Science in Computer Science

Orlando, FL
Expected April 2027

TECHNICAL SKILLS

Languages: Java, C, JavaScript, TypeScript, PHP, SQL, HTML/CSS
Frameworks & Libraries: React, React Native, Next.js, NestJS, Node.js, Express, Zustand, GSAP, Tailwind
Infrastructure & DevOps: Docker, Kubernetes, NGINX, Turborepo, Git, GitHub
Databases & Tools: PostgreSQL, MongoDB, MySQL, REST APIs, Expo

EXPERIENCE

Global Radio Outreach (GRO) Remote
Software Engineering Intern *May 2026 – Present*

- Contributing to the full-stack modernization of a multilingual missions CMS platform built as a Turborepo monorepo with a Next.js dashboard, Next.js seeker-facing frontend, and NestJS/Express API.
- Implementing UI components with custom React hooks for the seeker-facing frontend and CMS dashboard, translating UX/UI mockups into production React/Next.js components styled with Tailwind CSS.
- Integrating i18n internationalization utilities and configuring NGINX for multilingual routing across seeker-facing locales.
- Collaborating within a multi-container Docker and Kubernetes architecture, where each supported language runs as an isolated, orchestrated container duplicated from a shared primary codebase, ensuring frontend features remain consistent across locales.
- Integrating analytics tooling (Plausible/Umami) to track engagement metrics across seeker-facing locales.
- Participating in Agile project planning, testing, and debugging to improve performance, scalability, and reliability, including contributing to the backend's transition from MongoDB to PostgreSQL.

PROJECTS

BookDrop (Personal Project) | *React Native, Expo, TypeScript, Zustand, Node.js, MongoDB* May 2026

- A cross-platform social discovery app utilizing a Zustand-based state management architecture to synchronize authentication and session persistence.
- Architected an infinite-scrolling community feed with customized cursor-based pagination logic, reducing initial data payload size by 60%.
- Designed a custom synchronization layer using the React Native Animated API to maintain UI fluidity during high-latency API requests.
- Implemented secure JWT-based identity management with encrypted local storage, ensuring consistent user authorization across navigation stacks.

LesChic (Class Project) | *React, TypeScript, GSAP, Tailwind, Node.js, MongoDB* April 2026

- Collaborated with a team of 5 to develop a luxury wardrobe manager, contributing cinematic UI interactions built with GSAP ScrollTriggers and SVG masking.
- Led the implementation of an Optimistic UI update strategy, allowing users to manage large asset libraries with perceived zero-latency via local state reconciliation.
- Implemented a recursive data transformation algorithm to normalize complex color metadata, increasing database query efficiency and filter accuracy.
- Enforced strict TypeScript type-safety across the full stack to eliminate runtime errors associated with null-prop access in shared components.

SeaYourContacts (Class Project) | *JS, PHP, MySQL, CSS* February 2026

- Co-developed a LAMP-stack contact management system in an Agile team environment, utilizing Git for conflict-free version control and feature branching.
- Optimized database interactions by designing normalized SQL schemas, reducing data redundancy while handling concurrent CRUD operations.
- Implemented an asynchronous search engine that filters contacts via local client-side state, significantly reducing unnecessary server pings.
- Collaborated on responsive design principles using CSS Grid and Flexbox, ensuring layout integrity across all mobile and desktop breakpoints.
